Summary

System Engineer with 3+ years of experience in backend development and production support, specializing in PL/SQL, Pro*C, Java and Linux systems. Experienced in optimizing high-volume financial systems at NSE, including database design, SQL tuning, debugging, and performance enhancement. Hands-on with Java OOP, Spring Framework and basic API concepts, Git, SVN, CI/CD, and Agile/Scrum practices across the full software development lifecycle.

Experience

Tata Consultancy Services (Digital Cadre) Oct 2023 – Present
System Engineer Mumbai, Maharashtra

- Developed and optimized backend applications using Java, Pro*C, PL/SQL, and Shell scripting for high-volume financial systems at National Stock Exchange (NSE), following coding standards and best practices.
- Analyzed business requirements (BR) and translated them into technical specifications and scalable, efficient software solutions.
- Designed and optimized database schemas, stored procedures, packages, and complex Oracle SQL queries; improved performance and reduced execution time through indexing and execution-plan analysis.
- Worked with Spring-based Java services and applied basic API knowledge for backend data exchange.
- Conducted unit, integration, and load testing to ensure high system reliability and stability in production.
- Provided production support by debugging critical issues and performing root-cause analysis, ensuring minimal downtime and faster resolution.
- Used Git and SVN for code management and collaboration; participated in code reviews and CI/CD-based deployments.
- Reduced deployment time by 25% through improved version control practices and workflow optimization.
- Collaborated with the modernization team to migrate legacy Pro*C applications into Java-based systems, improving maintainability and scalability.
- Worked in Agile/Scrum teams across the SDLC (design, development, testing, deployment) and documented code, system design, and technical processes for knowledge sharing.

Projects

NSE Direct Payout to Client Demat Account

- Developed a real-time MTF settlement application for NSE for direct payout to client Demat accounts.
- Implemented backend services and database optimization using Pro*C, Java, Shell Scripting, and Oracle PL/SQL.
- Worked on production support, performance optimization, and reconciliation for high-volume trading transactions.

Automated Material Handling System

- Designed and developed an automated system to improve manufacturing efficiency and reduce manual effort.
- Reduced cycle time and increased operational productivity through process optimization.
- Enhanced workplace safety by integrating automation mechanisms.

Education

Bachelor of Engineering (GPA: 8.79)
K.K. Wagh Institute of Engineering Education and Research, Nashik Aug 2020 – May 2023

Diploma (83.29%)
Guru Gobind Singh Polytechnic, Nashik Aug 2017 – May 2020

SSC (75.40%)
F.C.E.M School, Nashik May 2017

Skills

Programming Languages : Java, PL/SQL, SQL, Pro*C, C, Shell Scripting

Frameworks & APIs : Spring Framework (Spring Boot), Basic API Knowledge, JDBC

Tools & Technologies : Git, SVN, Maven, Jenkins, IntelliJ, Putty, TOAD, Linux

Database : Oracle, MySQL, Relational Database Design, Stored Procedures, Query Optimization

Concepts : Backend Development, OOP Concepts, Design Patterns, Software Architecture Principles, SDLC, Agile & Scrum, CI/CD, Automated Testing, Code Review, Production Support, Debugging & Troubleshooting, Performance Tuning, Multithreading & Collections Framework, Exception Handling, Technical Documentation, Cloud Computing (Basics)

Achievements

- Received Best Project Delivery Award at TCS-NSE for outstanding performance.
- Secured 1st position in a National Level Technical Symposium.
- Won 1st position at Sandip Drishti Technical Festival.

Extracurricular

- Trained swimmer (freestyle, breaststroke, backstroke).
- Active participant in football and cricket tournaments.
